ManageEngine FacilitiesDesk

Fact Sheet

FACT SHTEET

Overview

ManageEngine® FacilitiesDesk is business ready web-based facilities management software that manages and monitors company's facilities and assets in a demanding business environment.

Prospects are small & medium and large & established and fast-growing enterprises that lack tools to effectively manage facilities available within their infrastructure – Everything from handling the maintenance requests to move requests, preventive maintenance to space management and purchase & contract management of the assets.

Typically they, have fragmented & manual process and scattered workforce. This results in lack visibility of the facilities available, poor asset maintenance control and un-reliable and inconsistent data – of all, which causes risk: delayed facilities management, increased resolution cycle time of requests. These in turn lead to slow decision making for the admin staff and hence increased cost of maintenance.

Product

ManageEngine® FacilitiesDesk is an integrated and web-based suit of facilities management solution offering two applications:

CMMS: Computerized Maintenance Management Software and **CAFM**: Computer Aided Facilities Management System.

Both focus on maximum cost cutting of facilities and asset management and maintenance and on maximizing the efficiency through automation interestingly at affordable price points

ManageEngine
FacilitiesDesk
