Tired of configuring user accounts manually

Juggling with complex scripts to extract Active Directory data

Spending long hours on managing security permissions

Hard to identify Inactive Users and Computers in Active Directory

Active Directory Management - Spend less time managing everyday tasks

Every IT Administrator faces the challenge of managing user accounts in Active Directory almost everyday. Configuring user properties manually is extremely time consuming, tiresome, and error-prone, especially in a large, complex Windows network. Moreover, accomplishing these tasks demands a deep knowledge in Active Directory and related technologies.

A software that can automate these cumbersome tasks, simplify AD management and provide exhaustive reports on tasks done and their status, is the need of the hour.

Introducing ADManager Plus!

ADManager Plus is a comprehensive web-based Active Directory Management software that simplifies User provisioning and Active Directory administration. The solution features a single console from which IT management can view and manage Active Directory users, computers, contacts, groups and reports on Active Directory environment. ADManager Plus avoids manual, error prone administrative activities on Active Directory and saves time and cost.

What can ADManager Plus do for you ?

◆ ADManager Plus facilitates the creation of multiple user accounts in Active Directory simultaneously with a single click.

◆ Numerous templates that carry standard user attributes can be created and used to set properties while creating bulk users.

◆ User attributes can also be imported from a CSV file while creating multiple user accounts, thus saving time drastically.

◆ Bulk modification of Exchange and Terminal Services attributes that corresponds to user accounts can also be accomplished using ADManager Plus.

◆ Day to day changes like resetting a forgotten password, unloack user accounts, changing the display name, creating Exchange mailboxes, moving users between OU's, etc., can be executed quickly and systematically.

◆ Effective management of other AD objects like Computers, Groups, Contacts etc.,

Key Features

Facility to create multiple users using CSV/template-based wizards.

Managing passwords for user accounts in Active Directory.

Managing user mailboxes in Exchange Servers.

File Server management for Active Directory users.

Perform cleanup operations, delete/disable/move Active Directory accounts.

An extensive built-in report library with more than 100 reports, including:

◆ Domain password policy
◆ Disabled users
◆ Inactive users
◆ Locked out users
◆ Accounts that never expire
◆ Group membership

Delegation features that ease workload on administrators.

A self-service portal that lets employees to update their own directory information with restrictions set by administrator.

Active Directory Reporting Solution

ADManager Plus features more than 100 inbuilt script-less reports that facilitate an efficient means to gather information about AD objects.

Up-to-date reports on users activity, computer status, Exchange properties, file system, printers helps the administrator to be aware of all changes that happen in a Active Directory. Furthermore, a high-level dashboard view helps you and your IT staff to take a quick glance on the AD object status.

Highlights of the Reporting Module

◆ More than 100 out of the box granular reports of Active Directory infrastructure resources.

◆ Can be exported to a number of formats like HTML, PDF, XLS, and CSV.

◆ Reporting for multiple Domains.

◆ Flexible and easy custom report development.

Delegation - Role Based Access Management

The sophisticated, integrated role concept of ADManager Plus allows for a more granular delegation of administrative authority. Typically, departmental IT representatives as well as help desk technicians will be authorized to initiate a Active Directory change request via ADManager Plus' web console. The functional, intuitive user interface appeals even to users who are uninitiated.
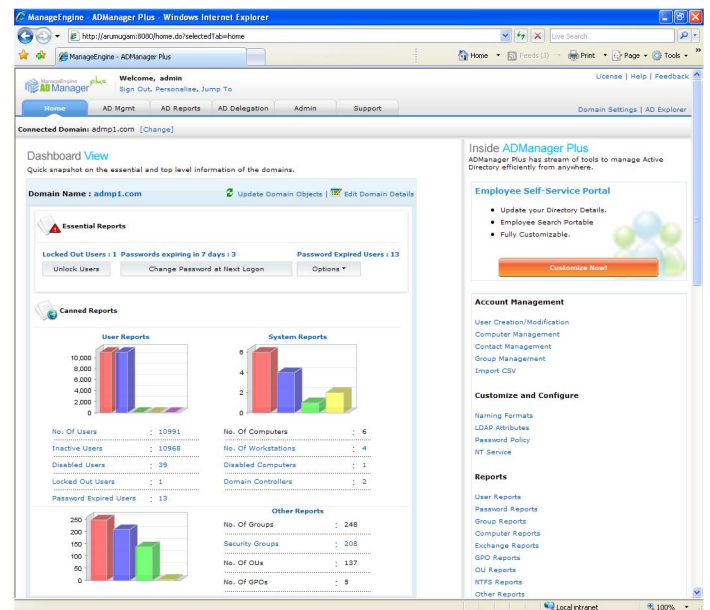

Most medium to large Active Directory enterprises use delegation of administration. Some common scenarios that you might see include:

◆ Help Desk Technicians can reset passwords for all users, except for the IT staff, HR employees, and executives.

◆ Members of the HR Managers group can add/modify users into all HR related groups. Apart from this they can also modify the addresses and phone numbers for all employee user accounts.

Employee Self Service Portal

ADManager Plus provides another powerful web-based feature that enables employees to update/modify their own account attributes as delegated by the Administrator. Employees can update their contact information like telephone number, address, location etc. in Active Directory by logging into the ADManager Plus web console using their Active Directory credentials.

It also has an inbuilt, portable search feature that helps employees to look for any user information in Active Directory.
